

ABSTRACT

A fixation plate kit for fixation of a distal radius fracture includes an elongated plate and at least one tensioning device. The elongated plate is configured to be mounted to the volar surface of the distal radius and includes a distal portion and a proximal portion. The distal portion extends from and forms an angle with the proximal portion and includes at least one tine extending from the distal portion. The tensioning device is configured to pass through an opening in the elongated plate, through a channel in the radius, and to be tightenable to fix the elongated plate to the radius.
